

GROVE MEDICAL BACKGROUND

LEARN MORE AT
WWW.SENSISCONDOMS.COM

GROVE MEDICAL was founded to develop R. Beau Thompson's innovative idea (now patented) for a better and easier-to-apply condom. The genesis of Beau's remarkable invention began one warm, frustrating evening when romance went astray as he struggled to apply a conventional condom and the moment was lost. Swearing, "never again," Beau began the quest for a better way.

After refining Sensis' design on paper, Beau retreated to his shop and with the help of an old dot matrix printer, a pole spear and some spare car parts... the first prototype for our current "third generation" machine was born. The path from that primitive device to today's high-efficiency manufacturing plant and finished product launch spanned more than a few years – requiring deep reserves of both patience and perseverance.

But it happened. And today, Beau and his Grove Medical partners are proud to offer you the first truly significant advance in condom technology in over fifty years.
